

8.0 APPROVED MATERIALS

(Revised February 2026)

8.01 GENERAL

Western maintains a list of Approved Materials, and only those materials on the most current list have been approved for use within Western. It is the sole responsibility of the user to assure that the product proposed is currently approved. Western may require installation of a different product in special circumstances.

Manufacturers may request approval by (1) making a formal written request for approval, (2) providing detailed drawings and technical information on their product, and (3) providing a non-returnable sample of the product. Documentation of use by other local water purveyors (with telephone numbers and contact names) will assist Western in evaluating the request for approval. Western will evaluate the product and if approved, the product will be placed on the Approved Materials List. All products shall always comply with Western's Standard Specifications.
